

As an International F/A, I believe inflight cell phone should be prohibited. There isn't enough conclusive data to support that 200+ persons on cell phones at the same time, or over an extended time, may not interfere with cockpit functions. Additionally, we would be the "cell phone inflight police". dealing with complaining passengers; I do not think my carrier is willing to lose revenue by trying to create a non cellphone area. There is more than enough time to talk on a cell phone...on the ground, prior to departure.

Thank you.
